DETAILED ACTION

Response to Arguments

1. Applicant's comments filed July 9, 2007, with respect to claim 6 in view of the priority Japanese document 2002-322653 have been fully considered and are persuasive. However, upon further consideration, a new ground(s) of rejection is made in view of Theobald et al.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Timbro (521,268, prior art cited by Applicant) in view of Theobald et al.

Timbro shows an optical system (figure 2) comprising at least one of a reflector (38, 39) and a lens (26'), a light emitting device comprising at least one light emitting element (40, page 3, line 24) for forming a first illuminating beam and at least one light emitting element (42, page 3, line 24) for forming a second illuminating beam, wherein the illuminating beams are switchable by selectively activating selected ones of the light emitting elements for forming the first and second illuminating beams (page 2, lines 4 to 5), a light shielding member (18) provided between the at least one light emitting element for forming the first beam and the at least one light emitting element for forming the second beam. However, Timbro does not disclose that the light emitting elements are semiconductor.

Theobald et al. teach that light emitting elements such as semiconductor light emitting elements are used in vehicle and have an operating life of up to 100,000 hours before they begin to degrade which is last longer and more durable than incandescent light bulbs having relatively short life and which may further be somewhat delicate in that excessive handling may result in failure due to filament breakage (column 1, lines 25 to 32).

It would have been obvious to one skilled in the art to which the subject matter pertains to replace the incandescent light emitting elements of Timbro with the semiconductor light

Art Unit: 2885

emitting elements, as shown by Theobald et al. to enhance the reliability and longevity of the light emitting elements.

4. Claims 3 to 5, 7 to 11, 15, 16, 18 and 19 are allowed.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Y Quach Lee whose telephone number is 571-272-2373. The examiner can normally be reached on Tuesday and Thursday from 8:30 am to 4:30 pm.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Customer Service whose telephone number is 571-272-2815.
